**Subject: Missing or mis-located Decal may cause wrong cutting unit set up.**

Some cutting units may have been produced without the decal that identifies the front roller position or the decal may have been installed in the wrong location. An incorrectly located decal will result in an improper attitude of the bedknife, which could result in quality-of-cut issues. Replacement decals are available through your local Toro distributor. Instructions for checking the proper decal location are described below.

## ROLLER BRACKET DECAL INSTALLATION INSTRUCTIONS for GREENSMaster 3200/3200-D Cutting Units

1. Assemble the Front Roller Brackets in the appropriate “Figure-Eight” hole locations as shown.
2. The notch on the brackets should align with position 2 on the decal.
3. Remove and install a replacement Bracket Positioning Decal (94-8169) as necessary to complete the assembly.
