Subject: SPRAY TANK MATERIAL SPILLING DIRECTLY ON ENGINE

A rubber flap has been added to the existing Engine Cover Kit (92-1344). The new flap will cover the engine distributor and protect it from spilled material that may drip from the spray tank.

Due to the addition of the rubber flap, the Engine Cover Kit has changed part numbers from (92-1344) to (99-1214).

NOTE: Rubber Flap (99-1212) in Engine Cover Kit (99-1214) can be installed on older engine covers. To install, use the rubber flap as a template, drill the appropriate 7/32" (5.5mm) holes and rivet the flap to the cover.
