

Workman[®] 3000 and 4000

Model/Serial Range: **Model Number:** **Serial Numbers:**
 ALL 00000-99999

Subject: Tire compound change for improved wear capability.

The ribbed front turf tire on the Workman vehicle uses a rubber compound specifically designed for Greens and Fairways to minimize damage to the turf. When operating on hard surface areas, such as cart paths or roads, the front tires will wear at a faster rate than a hard surface tire. Making sharp turns at high speed will accelerate this wear. Front Tire (94-5261) is now available for all Workman Vehicles (including 4WD units). This tire is manufactured from a rubber compound that will provide improved wear characteristics for hard surface operation while continuing to minimize damage to the turf.

A date code molded into the side-wall of the tire identifies the original tire from the improved tire as shown below. Any tire with a Date Code of **C4X426** and earlier are the original tire.
