▲ WARNING

While maintenance or adjustments are being made, someone could start the engine. Accidental starting of the engine could seriously injure you or other bystanders.

Remove the key from the ignition switch, engage parking brake, and pull the wire(s) off the spark plug(s) before you do any maintenance. Also push the wire(s) aside so it does not accidentally contact the spark plug(s).

Note: Determine the left and right sides of the machine from the normal operating position.

Note: Park the unit on a level surface. Ensure that all moving parts have stopped, the parking brake is engaged, the key has been removed, and the spark-plug wire has been disconnected. Allow the unit to cool before starting these instructions.
