| | 04481 | 50001-70495 |
| | 04482 | 50001-71082 |
| | 04483 | 50001-71291 |

Subject: Availability of performance improvement kit for cutting units.

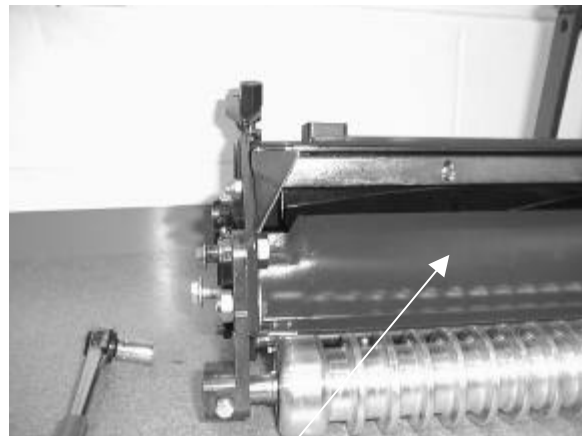

A special performance kit is now available at no charge to enhance the grass collection capability, improve the reliability of the Front Shield retainer clips, and reduce the volume of grease needed to fully lubricate the Rear Roller bearings in your Greensmaster 3200 Cutting Units. The kit contains instructions and all the parts required for updating three cutting units. The main contents of this kit are:

- 1) Replacement Rear Shields with an adjustable cutoff bar and deflectors for better throw characteristics.
- 2) Replacement Front Shields with a smoother profile and larger retainer clips for less clumping and to upgrade the retainers to a more durable design.
- 3) Grease Sleeves that can be installed inside the Rear Rollers to make maintenance easier by reducing the volume of grease required for filling the bearing cavities.

If you are interested in the improvements offered by this kit, contact your local Toro distributor for availability and details of this program.

Improved Rear Shield with Cut-Off Bar and Deflectors.

Improved Front Shield with Larger Retaining Spring Clips.
