Subject: Servicing Steering Circuit hydraulic tubes.

Reelmaster 4000-D tractors are built with Hydraulic Tubes (98-1262 & 98-3843) that extend through the tractor chassis for steering circuit oil supply. These tubes are installed at the factory before the tractor is fully assembled. This design can cause difficulty when replacing these tubes, due to the many obstacles on the tractor chassis.

A two-piece assembly is now available to make replacement of these tubes easier. All future orders for either of the factory production tubes (98-1262 & 98-3843) will cross-reference to Hydraulic Tube Kit (105-3333). This kit is now available through your local Toro Commercial Products Distributor.
