

Nozzle Selection Guide

for Multi-Pro Sprayers and Workman Vehicles

Model No. All Models

Selection Guide

Using the Nozzle Selection Tables

Note: The Unit Definitions and Conversions table is located on

Note: Toro recommends a vehicle speed of 3 to 5 MPH (5 to 9 km/h) and a nozzle pressure of 30-50 psi (2.0-3.5 Bar) while spraying.

The nozzle selection tables show application rates using specific nozzles while the vehicle travels at a various speeds.

The tables show nozzle application rates in US Gallons per Acre, US Gallons per 1,000 ft² and Liters per Hectare. Each table is organized by nozzle and each nozzle has a range of pressures and vehicle speeds listed.

See the nozzle selection tables in the following section to ensure that your spray nozzles have the capacity necessary to achieve the desired application rate.

- The table can be used to select the correct nozzle.
Find the desired application rate within the appropriate table at the preferred vehicle speed and pressure, then select the nozzle that is listed in the left columns.

Example:

The desired application rate is 24 GPA for the material to be sprayed. The preferred vehicle speed is 5 MPH. The desired pressure range is 30-50 psi.

Find the desired speed column at the top of the table. Follow that column down until you see your desired rate within the 30-50 psi pressure range.

As listed in the table, the nozzle with Toro part number 95-9222 has an application rate of 23.8 GPA when the vehicle speed is 5 MPH and pressure would be 40 psi.

- The table can be used to verify that a spray nozzle has the capacity necessary to achieve the application rate selected.

Find the nozzle in the left columns of the appropriate table, then look for application rate within that section by varying vehicle speed and/or pressure.

Example:

The yellow nozzle with Toro part number 95-9221 is the only nozzle available and the material to be sprayed has an application rate of 20 GPA.

If vehicle speed is slowed to 3.5 MPH and pressure is raised to 60 psi one can achieve an application rate of 20.4 GPA with the yellow nozzle.

Selecting a Nozzle

GPA or US Gallons per 1000 ft²

- Determine the desired application rate from the manufacturer's labeling.
_____ Gallons per acre or per 1000 ft²
- Determine the vehicle speed to apply the material.
_____ MPH
- Verify that the nozzle spacing is 20 inches.
- Determine the Gallons per Minute using either the appropriate Nozzle Selection Table or GPM formula located at the end of this guide.
_____ GPM
- Select nozzle size based on GPM.
- Once the nozzle is installed, spray water for initial test/calibration. Please refer to the Calibrating the Spray Pro™ Monitor section in the Operator's Manual. Use the Application Rate Switch to increase or decrease the application rate.

Liters per Hectare

1. Determine the desired application rate from the manufacturer's labeling.
_____ Liters per Hectare
2. Determine the vehicle speed to apply the material.
_____ KmPH
3. Verify that the nozzle spacing is 50 centimeters.
4. Determine the Liters per Hectare using either the appropriate Nozzle Selection Tables or Liters per Hectare formulas located at the end of this guide.
_____ Liters per Hectare
5. Select nozzle size based on Liters per Hectare.
6. Once the nozzle is installed, spray water for initial test/calibration. Please refer to the Calibrating the Spray Pro Monitor section in the Operator's Manual. Use the Application Rate Switch to increase or decrease the application rate.

Nozzle Selection Tables

Important: All application rates have been calculated using a nozzle spacing set up by the manufacturer (20 inches or 50 cm). If the nozzle spacing is changed, these application rates will no longer apply.

*This is the pressure at the nozzle. System pressure may be set higher.

Calculating Application Rates

Use the following formulas to verify application rates or to determine new application rates. The formulas are divided by application rate units.

$$\text{US Gallons per Acre} = \frac{(5,940 \times \text{GPM per Nozzle})}{(\text{MPH} \times 20^*)}$$

$$\text{US Gallons per 1000 ft}^2 = \frac{(136 \times \text{GPM per Nozzle})}{(\text{MPH} \times 20^*)}$$

* Toro nozzle spacing is 20 inches

$$\text{Speed (MPH)} = \frac{(\text{Distance (ft)} \times 60)}{(\text{Time (seconds)} \times 88)}$$

$$\text{Liters per Hectare} = \frac{(60,000 \times \text{Liters per minute})}{(\text{Kmph} \times 50^*)}$$

* Toro nozzle spacing is 50 centimeters

$$\text{Speed (Kmph)} = \frac{(\text{Distance (m)} \times 36)}{(\text{Time (seconds)})}$$

US Gallons X 0.83267 = Imperial Gallons
US Gallons X 8.34 = Pounds (Water)

Acre Conversions
1 Acre = 43,560 ft ²
1 square meter = 10.764 ft ²
1 hectare = 2.471 acres or 10,000 m ²

Length Conversions
1 millimeter (mm) = 0.039 in
1 centimeter (cm) = 0.393 in
1 meter (m) = 3.281 in
1 kilometer (km) = 0.621 mile
1 inch = 25.4 millimeters; 2.54 centimeters
1 mile = 1.609 kilometers

Pressure Conversions
1 psi = 0.069 Bar
1 Bar = 14.5 psi

Unit Definitions and Conversions

Units	Definition
GPM	US Gallons per minute
L/min	Liters per minute
dL/min	Deciliters per minute
psi	Pounds per square inch
Bar	Bar
GPA	US Gallons per acre
L/ha	Liters per hectare
mL/ha	Milliliters per hectare
Gallons/1000ft ²	US Gallons per 1,000 ft ²
mm	Millimeter
cm	Centimeter
MPH	Miles per hour
km	Kilometer
Kmph	Kilometers per hour

Liquid Conversions
US Gallons X 128 = Fluid Ounces
US Gallons X 3.785 = Liters

Calculating Nozzle Capacity

Calculating in US Gallons per Acre or US Gallons per 1000 ft²

To calculate the nozzle capacity you need to know the following:

- The recommended application rate for material being used in US gallons per acre or per 1000 square feet.
- The preferred vehicle speed in miles per hour.
- The nozzle spacing along boom (20 inches).

With this information you can calculate the volume per minute (or flow rate) for each nozzle using the following formula.

GPA Example:

$$\text{GPM per nozzle} = \frac{(\text{GPA} \times \text{MPH} \times 20 \text{ Inches})}{5,940}$$

** Toro nozzle spacing is 20 inches*

US Gallons per Acre Formula

Application Rate (AR)= 45 US Gallons per Acre
 Vehicle Speed (VS)= 4 MPH Nozzle Spacing (NS)= 20 inches

$$\frac{(\text{AR} \times \text{VS} \times \text{NS})}{5,940} = \frac{(45 \times 4 \times 20)}{5,940} = 0.61 \text{ GPM per nozzle}$$

With 0.61 GPM and recommended pressure of 30-50 psi select the gray nozzle with Toro part number 95-9224.

U.S. Gallons per 1000 ft² Example:

$$\text{GPM per nozzle} = \frac{(\text{Gallons per 1000 ft}^2 \times \text{MPH} \times 20 \text{ Inches})}{136}$$

** Toro nozzle spacing is 20 inches*

U.S. Gallons per 1000 ft² Formula

Application Rate (AR)= 1 U.S. Gallons per 1000 ft²
 Vehicle Speed (VS)= 4 MPH Nozzle Spacing (NS)= 20 inches

$$\frac{(\text{AR} \times \text{VS} \times \text{NS})}{136} = \frac{(1 \times 4 \times 20)}{136} = 0.59 \text{ GPM per nozzle}$$

With 0.59 GPM and approximate pressure of 30-50 psi the nozzle with Toro part number 95-9224 would be selected.

Calculating in Liters per Hectare

To calculate the nozzle capacity you need to know the following:

- The recommended application rate for material being used in liters per hectare.
- The preferred vehicle speed in kilometers per hour.
- The nozzle spacing along boom (50 centimeters).

With this information you can calculate the volume per minute (or flow rate) for each nozzle using the following formula.

L/ha Example:

$$\text{Liters a Minute per nozzle} = \frac{(\text{Liters per ha} \times \text{KmPH} \times 50 \text{ cm})}{60,000}$$

** Toro nozzle spacing is 50 centimeters*

US Gallons per Acre Formula

Application Rate (AR)= 910 Liters per Hectare
 Vehicle Speed (VS)= 5 KmPH Nozzle Spacing (NS)= 50 centimeters

$$\frac{(\text{AR} \times \text{VS} \times \text{NS})}{60,000} = \frac{(910 \times 5 \times 50)}{60,000} = 3.79 \text{ Liters a minute per nozzle}$$

Use L/minute and Pressure to select an appropriate nozzle from nozzle selection tables in the following section.

With 3.79 L/minute and recommended pressure of 2.7 Bar the nozzle with Toro part number 95-9188 would be selected.

Notes:

Notes:

Count on it.
