

Carburetor Replacement Kit

Fuel Line Replacement and Routing Information

Model No. 119-1996 and 120-4419

Installation Instructions

This kit is designed for Trained Toro Dealer Technicians. If you are not a Toro Dealer Technician and have questions, please contact your local Authorized Toro Service Dealer.

Important: *Do not reuse the long fuel line between the fuel filter and the carburetor*—replace it with the one included in this kit. You must replace the original long fuel line; it leaches chemicals that will damage the carburetor. You do not need to replace the short fuel line between the fuel tank and fuel filter.

Install and route the **new, long** fuel line using the existing hose clamps as illustrated in Figure 1 and lightly secure it with a cable tie. **Ensure that the fuel line does not contact the governor linkage.**
