Operator's Manual

**53cm Heavy-Duty Recycler®/Rear
Bagger Lawn Mower**

Model No. 22293—Serial No. 31400001 and Up

g024323

This product complies with all relevant European directives. For details, see the separate product-specific Declaration of Conformity (DOC) sheet.

Figure 2

1. Safety alert symbol

Introduction

This rotary-blade, walk-behind lawn mower is intended to be used by residential homeowners or professional, hired operators. It is designed primarily for cutting grass on well-maintained lawns on residential or commercial properties. It is not designed for cutting brush or for agricultural uses.

Read this information carefully to learn how to operate and maintain your machine properly and to avoid injury and equipment damage. You are responsible for operating the machine properly and safely.

You may contact Toro directly at www.Toro.com for product and accessory information, help finding a dealer, or to register your product.

Whenever you need service, genuine Toro parts, or additional information, contact an Authorized Service Dealer or Toro Customer Service and have the model and serial numbers of your machine ready. [Figure 1](#) identifies the location of the model and serial numbers on the product. Write the numbers in the space provided.

Figure 1

1. The model and serial number plate is in either of these 2 locations.

Model No. _____
Serial No. _____

This manual identifies potential hazards and has safety messages identified by the safety alert symbol ([Figure 2](#)), which signals a hazard that may cause serious injury or death if you do not follow the recommended precautions.

Safety

This machine has been designed in accordance with EN ISO 5395:2013.

Improperly using or maintaining this machine can result in injury. To reduce the potential for injury, comply with these safety instructions.

To ensure maximum safety, best performance, and to gain knowledge of the product, it is essential that you and any other operator of the mower read and understand the contents of this manual before the engine is ever started. Pay particular attention to the safety alert symbol (Figure 2), which means Caution, Warning, or Danger—“personal safety instruction.” Read and understand the instruction because it has to do with safety. Failure to comply with the instruction may result in personal injury.

General Lawn Mower Safety

This cutting machine is capable of amputating hands and feet and of throwing objects. Failure to observe the following safety instructions could result in serious injury or death.

Training

- Read the instructions carefully. Be familiar with the controls and the proper use of the equipment.
- Never allow children or people unfamiliar with these instructions to use the machine. Local regulations can restrict the age of the operator.
- Keep in mind that the operator or user is responsible for accidents or hazards occurring to other people or their property.
- Understand explanations for all pictograms used on the machine or in the instructions.

Gasoline

WARNING-Gasoline is highly flammable. Take the following precautions.

- Store fuel in containers specifically designed for this purpose.
- Refuel outdoors only and do not smoke while refueling.
- Add fuel before starting the engine. Never remove the cap of the fuel tank or add gasoline while the engine is running or when the engine is hot.
- If gasoline is spilled, do not attempt to start the engine but move the machine away from the area of spillage and avoid creating any source of ignition until gasoline vapors have dissipated.
- Replace all fuel tank and container caps securely.

Preparation

- While mowing, always wear substantial, slip-resistant footwear and long trousers. Do not operate the equipment when barefoot or wearing open sandals.
- Thoroughly inspect the area where the equipment is to be used and remove all stones, sticks, wires, bones and other foreign objects.
- Before using, always visually inspect to see that guards and safety devices, such as deflectors and/or grass catchers, are in place and working correctly.
- Before using, always visually inspect to see that the blades, blade bolts and cutter assembly are not worn or damaged. Replace worn or damaged blades and bolts in sets to preserve balance.

Starting

- Do not tilt the machine when starting the engine unless the machine must be tilted for starting. In this case, do not tilt it more than absolutely necessary and lift only the part which is away from the operator.
- Start the engine carefully according to instructions and with feet well away from the blade(s) and not in front of the discharge chute.

Operation

- Never mow while people, especially children, or pets are nearby.
- Mow only in daylight or in good artificial light.
- Stay alert for holes in the terrain and other hidden hazards.
- Do not put hands or feet near or under rotating parts. Keep clear of the discharge opening at all times.
- Never pick up or carry a lawn mower while the engine is running.
- Use extreme caution when reversing or pulling a pedestrian-controlled mower toward you.
- Walk, never run.
- Slopes:
 - Do not mow excessively steep slopes.
 - Exercise extreme caution when on slopes.
 - Mow across the face of slopes, never up and down, and exercise extreme caution when changing direction on slopes.
 - Always be sure of your footing on slopes.
- Reduce speed on slopes and in sharp turns to prevent overturning or loss of control.
- Stop the blade if the machine must be tilted for transportation when crossing surfaces other than grass and when transporting the machine to and from the area to be mowed.
- Do not operate the engine in a confined space where dangerous carbon monoxide and other exhaust gasses can collect.

- Stop the engine
 - whenever you leave the machine.
 - before refueling.
 - before removing the grass catcher.
 - before making height adjustment unless adjustment can be made from the operating position.
- Stop the engine and disconnect the spark-plug wire.
 - before clearing blockages or unclogging chute.
 - before checking, cleaning or working on the machine.
 - after striking a foreign object, inspect the machine for damage and make repairs before restarting and operating the machine.
 - if the machine starts to vibrate abnormally (check immediately).
- Lightning can cause severe injury or death. If you see lightning or hear thunder in the area, do not operate the machine; seek shelter.
- Watch out for traffic when crossing or near roadways.

Maintenance and Storage

- Keep all nuts, bolts, and screws tight to be sure that the equipment is in safe working condition.
- Do not use pressure-cleaning equipment on the machine.
- Never store the equipment with gasoline in the tank and inside a building where fumes can reach an open flame or spark.
- Allow the engine to cool before storing in any enclosure.
- To reduce the fire hazard, keep the engine, silencer, battery compartment and gasoline storage area free of grass, leaves, or excessive grease.
- Check grass catcher components and the discharge guard frequently and replace with manufacturer's recommended parts, when necessary.
- Replace worn or damaged parts for safety.
- Replace faulty silencers.
- If the fuel tank has to be drained, do this outdoors.
- Do not change the engine governor settings or overspeed the engine. Operating an engine at excessive speed can increase the hazard of personal injury.
- Be careful while adjusting the machine to prevent entrapment of the fingers between moving blades and fixed parts of the machine.
- **To ensure the best performance and safety, purchase only genuine Toro replacement parts and accessories. Do not use *will fit* parts and accessories; they may cause a safety hazard.**

Hauling

- Use care when loading or unloading the machine into a trailer or a truck.

- Use full-width ramps for loading the machine into a trailer or a truck.
- Tie the machine down securely using straps, chains, cable, or ropes. Both the front and the rear straps should be directed down and outward from the machine.

Sound Pressure

This unit has a sound pressure level at the operator's ear of 88 dBA, which includes an Uncertainty Value (K) of 1 dBA.

The sound pressure level was determined according to the procedures outlined in EN ISO 5395:2013.

Sound Power

This unit has a guaranteed sound power level of 98 dBA, which includes an Uncertainty Value (K) of 1 dBA.

The sound power level was determined according to the procedures outlined in ISO 11094.

⚠ CAUTION

Long-term exposure to noise while operating the machine may cause some hearing loss.

Wear adequate hearing protection whenever you operate the machine for an extended period of time.

Hand/Arm Vibration

Measured vibration level for left hand = 2.3 m/s²

Measured vibration level for right hand = 2.7 m/s²

Uncertainty Value (K) = 1.4 m/s²

Measured values were determined according to the procedures outlined in EN ISO 5395:2013.

⚠ CAUTION

Long-term exposure to vibration while operating the machine may cause some numbness in the hands and wrists.

Wear gloves that dampen the vibration whenever you operate the machine for an extended period of time.

Safety and Instructional Decals

Important: Safety and instruction decals are located near areas of potential danger. Replace damaged decals.

Manufacturer's Mark

1. Indicates the blade is identified as a part from the original machine manufacturer.

112-8760

1. Thrown object hazard—keep bystanders a safe distance from the machine.
2. Cutting/dismemberment of hand or foot—stay away from moving parts.

116-7583

1. Warning—Read the Operator's Manual. Do not operate this machine unless you are trained.
2. Thrown object hazard—keep bystanders a safe distance from the machine.
3. Thrown object hazard—Do not operate the mower without the rear discharge plug or bag in place.
4. Cutting/dismemberment hazard of hand or foot, mower blade—stay away from moving parts; keep all guards in place.
5. Warning—wear hearing protection.
6. Cutting/dismemberment hazard of hand or foot, mower blade—Do not operate up and down slopes; operate side to side on slopes; stop the engine before leaving the operating position—pick up objects that could be thrown by the blades; and look behind you when backing up.

130-9656

1. Choke
2. Fast
3. Slow
4. Engine—stop

131-0822

1. Self-propel drive—Attention; premature wear of the transmission may occur if the belt is over-tightened; before servicing or performing maintenance, read the *Operator's Manual*.

Setup

Loose Parts

Use the chart below to verify that all parts have been shipped.

Procedure	Description	Qty.	Use
1	Handle	1	Install the handle.
	Hex-head-flange bolt (5/16 x 1-1/2 inches)	2	
	Carriage bolt (5/16 x 1-1/2 inches)	2	
	Flange nut (5/16 inch)	4	
2	No parts required	–	Fill the crankcase with oil.
3	No parts required	–	Adjust the self-propel drive.
4	No parts required	–	Assemble the grass bag.

Note: Determine the left and right sides of the machine from the normal operating position.

1

Installing the Handle

Parts needed for this procedure:

1	Handle
2	Hex-head-flange bolt (5/16 x 1-1/2 inches)
2	Carriage bolt (5/16 x 1-1/2 inches)
4	Flange nut (5/16 inch)

Procedure

1. Remove the cable guard from the handle ([Figure 3](#)) by removing the 2 carriage bolts and 2 locknuts that hold the cable guard to the handle.

Figure 3

1. Cable guard
2. Locknut (2)
3. Carriage bolt—1/4 x 1-1/2 inches (2)
4. Flange nut—5/16 inch (2)
5. Hex-head-flange bolt—5/16 x 1-1/2 inches (2)

Note: Save the guard, the carriage bolts, and the locknuts so that you can install it onto the handle later in this procedure.

2. Install the handle ends onto the machine housing with 2 hex-head-flange bolts (5/16 x 1-1/2 inches) and 2 flange nuts (5/16 inch) as shown in [Figure 3](#).
3. Set the machine to the desired cutting height; refer to [Adjusting the Cutting Height](#) (page 11).

- Stand behind the machine in the operating position to determine the handle height that is most comfortable for you (Figure 4).

Figure 4

- | | |
|--------------------------|-------------------------|
| 1. Handle | 4. Medium handle height |
| 2. Handle bracket (2) | 5. Lowest handle height |
| 3. Highest handle height | |

- Secure the handle onto the handle brackets at your desired handle height with 2 carriage bolts (5/16 x 1-1/2 inches) and 2 flange nuts (5/16 inch) as shown in Figure 5.

Important: Ensure that the bolt heads are on the inside of the handle and the nuts are on the outside of the handle.

Figure 5

- | | |
|--|-----------------------------|
| 1. Carriage bolt—5/16 x 1-1/2 inches (2) | 3. Flange nut—5/16 inch (2) |
| 2. Handle bracket (2) | |

- Position the cable guard onto the handle with the cable(s) inside the guard, and secure the guard to the

handle with the 2 carriage bolts and the 2 locknuts that you previously removed (Figure 3).

Important: Ensure that you do not pinch the cable(s) to the handle with when you install the cable guards onto the handle.

2

Filling the Crankcase with Oil

No Parts Required

Procedure

The engine crankcase is shipped without oil. Before starting the engine, fill the crankcase with oil. The engine crankcase (with oil filter) can hold 0.85 L (29 oz) of oil. Use only high-quality SAE 10W-30 weight detergent oil that has the American Petroleum Institute (API) service classification SH, SJ, or equivalent.

Before each use, ensure that the oil level is between the Add and the Full marks on the dipstick (Figure 6).

Figure 6

- | | |
|--------------|-------------|
| 1. Dipstick | 3. Add mark |
| 2. Full mark | |

Note: When the crankcase is empty, pour about 3/4 of the crankcase capacity of oil in the crankcase, then follow the procedure in this section.

- Move the machine onto a level surface.
- Clean around the dipstick (Figure 6).
- Remove the dipstick by rotating the cap counterclockwise and pulling it out.
- Wipe the dipstick clean with a clean cloth.

5. Insert the dipstick into the filler neck, then remove the dipstick.
6. Read the oil level on the dipstick.
 - If the oil level is below the Add mark on the dipstick, slowly pour a small amount of oil into the oil-fill tube, wait 3 minutes, and repeat steps 4 through 6 until the oil level is at the Full mark on the dipstick.
 - If the oil level is above the Full mark on the dipstick, drain the excess oil until the oil level on the dipstick is at the Full mark. Refer to [2 Filling the Crankcase with Oil](#) (page 8).

Important: If the oil level in the crankcase is too low or too high and you run the engine, you may damage the engine.

7. Insert the dipstick into the filler neck and rotate the cap clockwise until it is tight.

Figure 7

1. Handle
2. Frame
3. Grass bag

Note: Do not slip the bag over the handle ([Figure 7](#)).

2. Hook the bottom channel of the bag onto the bottom of the frame ([Figure 8](#)).

Figure 8

3. Hook the top and side channels of the bag onto the top and sides of the frame, respectively ([Figure 8](#)).

3

Adjusting the Self-Propel Drive

No Parts Required

Procedure

Important: You must adjust the self-propel-drive cable before you operate the machine for the first time. Refer to [Adjusting the Self-Propel Drive](#) (page 19).

4

Assembling the Grass Bag

No Parts Required

Procedure

1. Slip the grass bag over the frame as shown in [Figure 7](#).

Product Overview

Figure 9

- | | |
|---------------------------|-----------------------------|
| 1. Handle | 6. Spark plug |
| 2. Rear door | 7. Cutting-height lever (4) |
| 3. Fuel-tank cap | 8. Oil fill/dipstick |
| 4. Throttle-control lever | 9. Grass bag |
| 5. Air cleaner | 10. Blade-control bar |

Specifications

Weight	56.2 kg (124 lb)
Length	161 cm (63.5 in)
Width	54.6 cm (21.5 in)
Height	87.6 cm (34.5 in)

Operation

Note: Determine the left and right sides of the machine from the normal operating position.

Each time before you mow, ensure that the self-propel drive and the blade-control bar operate properly. When you release the blade-control bar, the blade and the self-propel drive should stop. If they do not, contact an Authorized Service Dealer.

⚠ CAUTION

This machine produces sound levels in excess of 85dBA at the operator's ear and can cause hearing loss through extended periods of exposure.

Wear hearing protection when operating this machine.

Figure 10

1. Warning—wear hearing protection.

Checking the Engine-Oil Level

Service Interval: Before each use or daily—Check the engine-oil level.

Before you use the machine, ensure that the oil level is between the Add and the Full marks as shown on the dipstick (Figure 11).

Figure 11

- | | |
|--------------|-------------|
| 1. Dipstick | 3. Add mark |
| 2. Full mark | |

If the oil level is below the Add mark, add oil. Refer to [2 Filling the Crankcase with Oil](#) (page 8).

Filling the Fuel Tank with Gasoline

⚠ DANGER

Gasoline is extremely flammable and explosive. A fire or explosion from gasoline can burn you and others.

- To prevent a static charge from igniting the gasoline, place the container and/or machine directly on the ground before filling, not in a vehicle or on an object.
- Fill the tank outdoors when the engine is cold. Wipe up spills.
- Do not handle gasoline when smoking or around an open flame or sparks.
- Store gasoline in an approved fuel container, out of the reach of children.
- For best results, use only clean, fresh (less than 30 days old), unleaded gasoline with an octane rating of 87 or higher ((R+M)/2 rating method).
- Oxygenated fuel with up to 10% ethanol or 15% MTBE by volume is acceptable.
- **Ethanol:** Gasoline with up to 10% ethanol (gasohol) or 15% MTBE (methyl tertiary butyl ether) by volume is acceptable. Ethanol and MTBE are not the same. Gasoline with 15% ethanol (E15) by volume is not approved for use. **Never use gasoline that contains more than 10% ethanol by volume**, such as E15 (contains 15% ethanol), E20 (contains 20% ethanol), or E85 (contains up to 85% ethanol). Using unapproved gasoline may cause performance problems and/or engine damage which may not be covered under warranty.
- **Do not** use gasoline containing methanol.
- **Do not** store fuel either in the fuel tank or in fuel containers over the winter unless a fuel stabilizer is used.
- **Do not** add oil to gasoline.

Important: To reduce starting problems, add fuel stabilizer to the fuel all season, mixing it with gasoline less than 30 days old.

Note: The capacity of the fuel tank is 3.8 L (1.0 US gallon).

Adjusting the Cutting Height

You can change the cutting height at each wheel by adjusting a cutting-height lever. Cutting heights are 25 mm (1 inch), 38 mm (1-1/2 inches), 51 mm (2 inches), 64 mm (2-1/2 inches), 76 mm (3 inches), 89 mm (3-1/2 inches), 102 mm (4 inches), 114 mm (4-1/2 inches).

⚠ DANGER

Adjusting the cutting-height levers could bring your hands into contact with a moving blade and result in serious injury.

- Stop the engine and wait for all movement to stop before adjusting the cutting height.
 - Do not put your fingers under the housing when adjusting the cutting height.
1. Pull the cutting-height lever toward the wheel (Figure 12) and move the lever to the desired setting.

Figure 12

1. Rear cutting-height lever (2)
 2. Front cutting-height lever (2)
-
2. Release the cutting-height lever and seat it securely in the notch.
 3. Adjust all the wheels to the same cutting-height setting.

Starting the Engine

1. Connect the spark-plug wire to the spark plug.
2. Open the fuel valve (Figure 13).

Figure 13

1. Throttle-control lever
2. Fuel valve

3. Move the throttle-control lever (Figure 13) to the Choke position.

Note: Do not use the choke when the engine is warm.

4. Pull the starter handle lightly until you feel resistance, then pull it sharply.

Note: Allow the rope to return slowly to the rope guide on the handle.

5. When the engine starts, move the throttle-control lever to the Fast position.

Stopping the Engine

Release the blade-control bar and move the throttle-control lever (Figure 13) to the Stop position.

Note: Close the fuel valve (Figure 13) if you will not be starting the engine soon afterward.

Operating the Self-Propel Drive and Engaging the Cutting Blade

This machine is equipped with a blade-brake clutch.

Important: To ensure that the blade-brake clutch is working properly, refer to [Checking the Blade-Brake Clutch](#) (page 13).

The machine has 3 ground speeds: 1 (slow), 2 (medium), and 3 (fast). The self-propel-drive lever is located below and behind the fuel tank (Figure 14).

Figure 14

1. Self-propel-drive lever

- To operate the self-propel drive without engaging the blade: Raise the blade-control bar to the handle (Figure 15).

Figure 15

1. Raise the blade-control bar to the handle.

- To operate the self-propel drive and engage the blade: Move the blade-control bar all the way to the right and raise it to the handle (Figure 16).

2
Figure 16

1. Move the blade-control bar to the right.
2. Raise the blade-control bar to the handle.

- **To disengage the self-propel drive and the blade:**
Release the blade-control bar.

Note: You can vary the ground speed by increasing or decreasing the distance between the blade-control bar and the handle. Lower the bar to decrease the ground speed when you are making a turn or if the machine is moving too fast for you. If you lower the bar too far, the machine stops self-propelling. Squeeze the bar closer to the handle to increase the ground speed. When you hold the bar tight against the handle, the machine self-propels at the maximum ground speed. Move the self-propel-drive lever to the Neutral position when you use the machine for trimming.

Checking the Blade-Brake Clutch

Check the blade-control bar before each use to ensure that the blade-brake clutch is operating properly.

Checking with the Grass Bag

1. Install the empty grass bag on the machine.
2. Start the engine.
3. Engage the blade.

Note: The bag should begin to inflate, indicating that the blade is engaged and rotating.

4. Release the blade-control bar.

Note: If the bag does not immediately deflate, the blade is still rotating. The blade-brake clutch may be deteriorating and, if ignored, could result in an unsafe operating condition. Have the machine inspected and serviced by an Authorized Service Dealer.

5. Stop the engine and wait for all moving parts to stop.

Checking without the Grass Bag

1. Move the machine onto a paved surface in a non-windy area.

2. Set all 4 wheels to the 76 mm (3 inch) cutting-height setting; refer to [Adjusting the Cutting Height \(page 11\)](#).
3. Take a half sheet of newspaper and crumple it into a ball small enough to go under the machine housing (about 76 mm or 3 inches in diameter).
4. Place the newspaper ball about 13 cm (5 inches) in front of the machine ([Figure 17](#)).

Figure 17

5. Start the engine.
6. Engage the blade.
7. Release the blade-control bar.
8. Immediately push the machine over the newspaper ball.
9. Stop the engine and wait for all moving parts to stop.
10. Go to the front of the machine and check the newspaper ball.

Note: If the newspaper ball did not go under the machine, repeat steps 4 through 10.

Note: If the newspaper is unravelled or shredded, the blade did not stop properly, which could result in an unsafe operating condition. Contact an Authorized Service Dealer.

Recycling the Clippings

This machine comes from the factory ready to recycle grass and leaf clippings back into the lawn. To prepare the machine to recycle:

- If the grass bag is on the machine, remove it; refer to [Removing the Grass Bag \(page 14\)](#).
- If the rear-discharge plug is not installed, grip it by the handle, raise the rear door, and insert it into the rear-discharge chute until the latch locks into place ([Figure 18](#)).

Figure 18

1. Rear-discharge plug
2. Rear door

⚠ WARNING

Operating the machine to recycle lawn clippings without the plug in place allows objects to be thrown in your direction or in the direction of bystanders. Also, contact with the blades could occur. Thrown objects or blade contact can cause serious injury or death.

Ensure that the rear-discharge plug is in place before you recycle the clippings. Never engage the blades without either the rear-discharge plug or the grass bag installed on the machine.

Bagging the Clippings

Use the grass bag when you want to collect grass and leaf clippings from the lawn.

⚠ WARNING

A worn grass bag could allow small stones and other similar debris to be thrown toward you or bystanders, resulting in serious personal injury or death.

Check the grass bag frequently. If it is damaged, install a new Toro replacement bag.

⚠ WARNING

The blades are sharp; contacting the blades can result in serious personal injury.

Stop the engine and wait for all moving parts to stop before leaving the operating position.

Installing the Grass Bag

1. Stop the engine and wait for all moving parts to stop.
2. Raise and hold up the rear door (Figure 19).

Figure 19

1. Rear door
2. Bag-rod end (2)
3. Notch (2)

3. Remove the rear-discharge plug by pushing in the latch with your thumb and pulling the plug out from the machine (Figure 18).
4. Install the bag-rod ends into the notches at the base of the handle, and rock the bag back and forth to ensure that the bag-rod ends are seated at the bottom of both notches (Figure 19).
5. Lower the rear door until it rests on the grass bag.

Removing the Grass Bag

⚠ DANGER

The machine can throw grass clippings and other objects through an opening in the machine housing. Objects thrown with enough force could cause serious personal injury or death to you or to bystanders.

- Never remove the grass bag and then start the engine without the discharge plug installed on the machine.
 - Never open the rear door on the machine when the engine is running.
1. Stop the engine and wait for all moving parts to stop.
 2. Raise the rear door.
 3. Remove the bag rod on the grass bag from the notches at the base of the handle (Figure 19).
 4. Install the discharge plug; refer to [Recycling the Clippings](#) (page 13).
 5. Lower the rear door.

Operating Tips

General Tips

- Review the safety instructions and read this manual carefully before operating the machine.
- Clear the area of sticks, stones, wire, branches, and other debris that the blade could hit and throw.
- Keep everyone, especially children and pets, away from the area of operation.
- Avoid striking trees, walls, curbs, or other solid objects. Never deliberately mow over any object.
- If the machine strikes an object or starts to vibrate, immediately stop the engine, disconnect the wire from the spark plug, and examine the machine for damage.
- Maintain a **sharp blade** throughout the cutting season. Periodically file down nicks on the blade.
- Replace the blade when necessary with an original Toro replacement blade.
- Mow only dry grass or leaves. Wet grass and leaves tend to clump on the yard and can cause the machine to plug or the engine to stall.

⚠ WARNING

Wet grass or leaves can cause serious injury if you slip and contact the blade.

Mow only in dry conditions.

- Clean under the machine after each mowing; refer to [Cleaning under the Machine \(page 23\)](#).
- Keep the engine in good running condition.
- Clean the air filter frequently. Mulching stirs up more clippings and dust which clogs the air filter and reduces engine performance.
- Set the engine speed to the fastest position for the best cutting results.

⚠ WARNING

Operating a machine with its engine running at a speed greater than the factory setting can cause the machine to throw a part of the blade or engine at you or bystanders, resulting in serious personal injury or death.

- **Do not change the engine speed setting.**
- **If you suspect the engine speed is faster than normal, contact an Authorized Service Dealer.**

Cutting Grass

- Grass grows at different rates at different times of the year. In the summer heat, it is best to cut grass at the 64

mm (2-1/2 inch), 76 mm (3 inch), or 89 mm (3-1/2 inch) cutting-height settings. Cut only about a third of the grass blade at a time. Do not cut below the 64 mm (2-1/2 inch) setting unless the grass is sparse or it is late fall when grass growth begins to slow down.

- When cutting grass over 15 cm (6 inches) tall, first mow at the highest cutting height setting and walk slower; then mow again at a lower setting for the best lawn appearance. If the grass is too long and the leaves clump on top of the lawn, the machine may plug and cause the engine to stall.
- Alternate the mowing direction. This helps disperse the clippings over the lawn for even fertilization.

If the finished lawn appearance is unsatisfactory, try 1 or more of the following:

- Sharpen the blade.
- Walk at a slower pace while mowing.
- Raise the cutting height on your machine.
- Cut the grass more frequently.
- Overlap cutting swaths instead of cutting a full swath with each pass.
- Set the cutting height on the front wheels a notch lower than the rear wheels. For example, set the front wheels at 64 mm (2-1/2 inches) and the rear wheels at 76 mm (3 inches).

Cutting Leaves

- After cutting the lawn, ensure that half of the lawn shows through the cut leaf cover. You may need to make more than a single pass over the leaves.
- For light leaf coverage, set all the wheels at the same cutting height setting.
- If there are more than 13 cm (5 inches) of leaves on the lawn, set the front cutting height 1 or 2 notches higher than the rear cutting height. This makes it easier to feed the leaves under the machine.
- Slow down your mowing speed if the machine does not cut the leaves finely enough.

Maintenance

Note: Determine the left and right sides of the machine from the normal operating position.

Recommended Maintenance Schedule(s)

Maintenance Service Interval	Maintenance Procedure
After the first 8 hours	<ul style="list-style-type: none"> • Change the engine oil and the oil filter.
After the first 25 hours	<ul style="list-style-type: none"> • Tighten any loose fasteners.
Before each use or daily	<ul style="list-style-type: none"> • Check the engine-oil level. • Inspect the mower blades for wear or damage. • Inspect the accelerator for wear or damage. • Remove grass clippings and dirt from under the housing. • Check the stopping time of the blade brake. The blade must stop within 3 seconds of releasing the blade-control bar; if it does not, contact an Authorized Service Dealer for repair. • Check for loose or missing fasteners on the engine. • Check for fuel or oil leaks. • Check or clean the recoil starter and the air-intake screen.
Every 25 hours	<ul style="list-style-type: none"> • Clean the foam pre-cleaner (more frequently in dusty conditions).
Every 50 hours	<ul style="list-style-type: none"> • Sharpen or replace the blade. Maintain it more frequently if the edge dulls quickly in rough or in sandy conditions. • Remove grass clippings and debris from under the belt cover. • Clean the blade-brake-clutch shield.
Every 100 hours	<ul style="list-style-type: none"> • Change the engine oil. • Inspect, clean, and adjust the spark plug gap; replace the spark plug if necessary. • Tighten any loose fasteners. • Check or clean the recoil starter and the air-intake screen.
Every 200 hours	<ul style="list-style-type: none"> • Change the engine-oil filter. • Have an authorized engine servicing dealer check for leaks in the fuel system and/or a deteriorating fuel hose. Replace parts if necessary.
Every 300 hours	<ul style="list-style-type: none"> • Replace the paper air filter (more frequently in dusty conditions). • Clean the cylinder and the cylinder-head fins. • Have an authorized engine servicing dealer check and adjust the engine idle speed. • Have an authorized engine servicing dealer clean the combustion chamber. • Have an authorized engine servicing dealer check and adjust the valve clearance. • Have an authorized engine servicing dealer clean and lap the valve seating surface.

Important: Refer to your engine owner's manual for additional maintenance procedures.

▲ CAUTION

If you leave the wire on the spark plug, someone could accidentally start the engine and seriously injure you or other bystanders.

Disconnect the wire from the spark plug before you do any maintenance. Set the wire aside so that it does not accidentally contact the spark plug.

Engine Maintenance

Servicing the Air Cleaner

Service Interval: Every 25 hours—Clean the foam pre-cleaner (more frequently in dusty conditions).

Every 300 hours—Replace the paper air filter (more frequently in dusty conditions).

Important: Do not operate the engine without the air filter assembly in place; otherwise, extreme engine damage will occur.

1. Stop the engine and wait for all moving parts to stop.
2. Disconnect the wire from the spark plug.
3. Remove the cover and clean it thoroughly (Figure 20).

Figure 20

1. Cover
2. Foam pre-cleaner and paper air filter
3. Air-cleaner base

4. Remove the foam pre-cleaner and the paper-air filter from the air-cleaner base (Figure 20)
5. Remove the foam pre-cleaner from the paper air filter, and wash the foam pre-cleaner with a mild detergent and water, then blot it dry.
6. Inspect the paper air filter, and replace it if it is excessively dirty.

Important: Do not try to clean a paper filter.

7. Install the foam pre-cleaner onto the paper air filter.
8. Install the foam pre-cleaner and paper air filter onto the air-cleaner base.
9. Install the cover.

Changing the Engine Oil

Service Interval: After the first 8 hours

Every 100 hours

Oil Capacity	
With oil filter	0.85 L (29 oz)
Without oil filter	0.65 L (22 oz)

1. Run the engine to warm the engine oil.

Note: Warm oil flows better and carries more contaminants.

⚠ WARNING

Oil may be hot after engine has been run, and contact with hot oil can cause severe personal injury.

Avoid contacting the hot engine oil when you drain it.

2. Stop the engine and wait for all moving parts to stop.
3. Disconnect the wire from the spark plug.
4. Close the fuel valve (Figure 13).
5. Drain the gasoline from the fuel tank.
6. Place a suitable drain pan under the dipstick/oil drain.
7. Clean around the dipstick.
8. Remove the dipstick by rotating the cap counterclockwise and pulling it out.
9. Tip the machine onto its **right** side (air filter up) to drain the oil into the drain pan.
10. After draining the oil, return the machine to the operating position.
11. Fill the crankcase to the Full mark on the dipstick with fresh oil; refer to [2 Filling the Crankcase with Oil \(page 8\)](#).
12. Insert the dipstick into the filler neck and rotate the cap clockwise until it is tight.
13. Wipe up any spilled oil.
14. Recycle the used oil according to local codes.

Changing the Engine-Oil Filter

Service Interval: Every 200 hours

1. Run the engine to warm the oil.

⚠ WARNING

Oil may be hot after the engine has been run, and contact with hot oil can cause severe personal injury.

Avoid contacting the hot engine oil when you drain it.

2. Stop the engine and wait for all moving parts to stop.
3. Disconnect the wire from the spark plug.
4. Drain the gasoline from the fuel tank.
5. Drain the engine oil; refer to [Changing the Engine Oil \(page 17\)](#).
6. Place a rag under the oil filter ([Figure 21](#)) to catch any oil that may leak out as you remove the oil filter.

Figure 21

1. Oil filter

7. Remove the oil filter.
8. Use your finger to coat the gasket on the new oil filter with oil ([Figure 26](#)).

Figure 22

1. Gasket
-
9. Install the new filter by rotating it clockwise until the seal contacts the filter housing, then rotate the filter an additional 3/4 turn by hand.
 10. Fill the crankcase to the Full line on the dipstick with fresh oil; refer to [2 Filling the Crankcase with Oil \(page 8\)](#).
 11. Connect the wire to the spark plug.
 12. Run the engine for about 3 minutes.
 13. Stop the engine, wait for all moving parts to stop, and check for oil leakage around the filter.
 14. Add oil to compensate for the oil in the oil filter. Refer to [Checking the Engine-Oil Level \(page 10\)](#).
 15. Recycle the used oil filter properly.

Servicing the Spark Plug

Service Interval: Every 100 hours—Inspect, clean, and adjust the spark plug gap; replace the spark plug if necessary.

Use an **NGK BPR5ES** spark plug or equivalent.

1. Stop the engine and wait for all moving parts to stop.
2. Disconnect the wire from the spark plug.
3. Clean around the spark plug.
4. Remove the spark plug from the cylinder head.

Important: Replace a cracked, fouled, or dirty spark plug. Do not clean the electrodes because grit entering the cylinder can damage the engine.

5. Set the gap on the plug to 0.76 mm (0.030 inch) ([Figure 23](#)).

Figure 23

1. Center-electrode insulator
2. Side electrode
3. Air gap (not to scale)

6. Carefully install the spark plug by hand (to avoid cross threading) until it is hand tight.
7. Tighten the spark plug to 23 N-m (2.3 kgf-m, 17 ft-lb).

Important: A loose spark plug can become very hot and can damage the engine; overtightening a spark plug may damage the threads in the cylinder head.

8. Connect the wire to the spark plug.

Drive System Maintenance

Adjusting the Self-Propel Drive

If the machine is new, does not self-propel, or it tends to creep forward, adjust the drive cable.

1. Move the machine outside and onto a paved surface near a solid wall to safely prevent the machine from moving forward while the engine is running.
2. Position the machine with the front tires against the wall.

Note: Ensure that the area is well ventilated and clear of debris that could be thrown by the machine.

3. Shift the transmission to third gear.
4. Start the engine; refer to [Starting the Engine](#) (page 12).
5. Pull the self-propel-drive bar to the handle.

Note: The wheels should start to turn as the self-propel-drive bar just touches the handle.

6. Shut off the engine.
7. If you must adjust the machine, do the following:
 - If the wheels do not spin when you engage the self-propel-drive bar, the traction belt is too loose. Rotate the wheel-drive-control knob ([Figure 24](#)) clockwise 1 turn and repeat steps 4 through 6.

Figure 24

1. Wheel-drive-control knob

- If the wheels spin before you fully engage the self-propel-drive bar, the traction belt is too tight. Rotate the wheel-drive-control knob ([Figure 24](#)) counterclockwise 1 turn and repeat steps 4 through 6.
8. For a new traction belt, rotate the drive cable adjustment knob clockwise 1 additional turn to allow for the normal stretching of the belt during the break-in period.

Note: You can skip this step if you are adjusting a used belt.

Blade Maintenance

Maintaining the Blade

Always mow with a sharp blade. A sharp blade cuts cleanly and without tearing or shredding the grass blades.

1. Stop the engine and wait for all moving parts to stop.
2. Disconnect the wire from the spark plug.
3. Close the fuel valve by moving the fuel-valve lever to the **left** (Figure 13).
4. Drain the gasoline from the fuel tank.
5. Tip the machine onto its **right** side (air cleaner up) as shown in Figure 25.

Figure 25

1. Blade
2. Blade nuts
3. Accelerator

Inspecting the Blade

Service Interval: Before each use or daily—Inspect the mower blades for wear or damage.

Carefully examine the blade for sharpness and wear, especially where the flat and the curved parts meet (Figure 26A). Because sand and abrasive material can wear away the metal that connects the flat and curved parts of the blade, check the blade before using the machine. If you notice a slot or wear (Figure 26B and Figure 26C), replace the blade; refer to [Removing the Blade](#) (page 21).

Figure 26

1. Sail
2. Flat part of the blade
3. Wear
4. Slot formed

Note: For the best performance, install a new blade before the mowing season begins. During the year, file down any small nicks to maintain the cutting edge.

⚠ DANGER

A worn or damaged blade can break, and a piece of the blade could be thrown at you or bystanders, resulting in serious personal injury or death.

- Inspect the blade periodically for wear or damage.
- Replace a worn or damaged blade.

Inspecting the Accelerator

Service Interval: Before each use or daily—Inspect the accelerator for wear or damage.

Carefully examine the accelerator for excessive wear (Figure 27). Because sand and abrasive material can wear away the metal (especially in the area shown as item 2 in Figure 27), check the accelerator before using the machine. If you notice that a tab on the accelerator has been worn down to a sharp edge or there is a crack, replace the accelerator; refer to [Removing the Blade](#) (page 21).

Figure 27

1. Accelerator
2. Wear area
3. Tab
4. Crack formed

⚠ WARNING

A worn or damaged accelerator can break, and a piece of the accelerator could be thrown at you or bystanders, resulting in serious personal injury or death.

- Inspect the accelerator periodically for wear or damage.
- Replace a worn or damaged accelerator.

Removing the Blade

1. Grasp the end of the blade using a rag or a thickly padded glove.
2. Remove the blade nuts, the accelerator, and the blade (Figure 26).

Sharpening the Blade

Service Interval: Every 50 hours—Sharpen or replace the blade. Maintain it more frequently if the edge dulls quickly in rough or in sandy conditions.

File the top side of the blade to maintain its original cutting angle (Figure 28A) and inner cutting edge radius (Figure 28B). The blade will remain balanced if you remove the same amount of material from both cutting edges.

Figure 28

1. Sharpen the blade at this angle only.
2. Maintain the original radius here.

Balancing the Blade

1. Check the balance of the blade by placing the center hole of the blade over a nail or screwdriver shank clamped horizontally in a vise (Figure 29).

Figure 29

Note: You can also check the balance using a commercially manufactured blade balancer.

2. If either end of the blade rotates downward, file that end (not the cutting edge or the end near the cutting edge) until neither end of the blade drops.

Installing the Blade

1. Install a sharp, balanced Toro blade, the accelerator, and the blade nuts. The sail of the blade must point toward the top of the mower housing for proper installation.

Note: Torque the blade nuts to 20 to 37 N-m (15 to 27 ft-lb).

⚠ WARNING

Operating the machine without the accelerator in place can cause the blade to flex, bend, or break, resulting in serious injury or death to you or to bystanders.

Do not operate the machine without the accelerator in place.

2. Return the machine to the operating position.

Adjusting the Blade-Brake Cable

The blade-brake cable is adjusted at the factory; you do not need to adjust it unless you are replacing the cable or the blade-brake belt. **If you need to replace the cable, replace both the cable and the belt at the same time.**

1. Install a new blade-brake belt and assemble the machine except for the 2 belt covers on the top of the mower housing.
2. Install the new blade-brake cable, but do not tighten the cable clamp on the top of the mower housing (Figure 30).

Figure 30

1. Spring
2. Cable clamp and screw

3. Insert a 8 mm (5/16-inch) thick spacer between the blade-brake-control lever and the control bracket on the handle (Figure 31).

Figure 31

1. Handle
2. Self-propel-drive bar
3. Control bracket
4. Spacer—8 mm (5/16 inch) thick
5. Blade-brake-control lever

Important: Replacing the cable without replacing the belt may cause the gap between the blade-brake-control lever and the control bracket to be incorrect. If the gap is less than 8 mm (5/16 inch), the blade brake will not function properly and the blade will not stop within 3 seconds. If the gap is greater than 8 mm (5/16 inch), the belt will not properly drive the blade.

4. Pull the cable tight to remove the slack (but do not stretch the cable spring) and tighten the cable clamp screw to lock the adjustment in place.
5. Remove the spacer.

6. Ensure that there is slack in the cable and a gap between the blade-brake-control lever and the control bracket when the self-propel-drive bar is not engaged.
7. Install the 2 belt covers on the top of the mower housing.

Important: After installing the new blade-brake belt and blade-brake cable, check that the blade-brake clutch is operating properly and that the blade stops within 3 seconds; refer to [Checking the Blade-Brake Clutch \(page 13\)](#).

Cleaning

Cleaning under the Machine

To ensure the best performance, keep the underside of the machine clean. Be especially careful to keep the kickers free of debris (Figure 32).

Figure 32

1. Kickers

Washing Method

Service Interval: Before each use or daily

⚠ WARNING

The machine may dislodge material from under the machine.

- Wear eye protection.
 - Stay in the operating position (behind the handle) while the engine is running.
 - Do not allow bystanders in the area.
1. Position the machine on a flat concrete or asphalt surface near a garden hose.
 2. Start the engine.
 3. Hold the running garden hose at handle level and direct the water to flow on the ground just in front of the right rear tire (Figure 33).

Figure 33

1. Right rear wheel

Note: The blade will draw in water and wash out the clippings. Let the water run until you no longer see clippings being washed out from under the machine.

4. Stop the engine and wait for all moving parts to stop.
5. Turn off the water.
6. Start the machine and let it run for a few minutes to dry out the mower housing and its components.

Scraping Method

If washing does not remove all debris from under the machine, scrape it clean.

1. Disconnect the wire from the spark plug.
2. Drain the gasoline from the fuel tank.

⚠ WARNING

Tipping the machine may cause the gasoline to leak from the carburetor or the fuel tank. Gasoline is extremely flammable, highly explosive, and, under certain conditions, can cause personal injury or property damage.

Avoid fuel spills by running the engine dry or by removing the gasoline with a hand pump; never siphon.

3. Tip the machine onto its **right** side (air cleaner up).
4. Remove the dirt and grass clippings with a hardwood scraper. Avoid burrs and sharp edges.
5. Return the machine to the operating position.
6. Connect the wire to the spark plug.

Cleaning under the Belt Cover

Service Interval: Every 50 hours—Remove grass clippings and debris from under the belt cover.

1. Stop the engine and wait for all moving parts to stop.
2. Disconnect the wire from the spark plug.
3. Remove the belt cover (Figure 34) from the mower housing.

Figure 34

1. Belt cover

-
4. Lift off the cover and brush out all the debris around the belt area.
 5. Install the belt cover.
 6. Connect the wire to the spark plug.

Cleaning the Blade-Brake-Clutch Shield

Service Interval: Every 50 hours

Clean the blade-brake-clutch shield to ensure the best performance and to prevent parts from degrading. Clean the blade-brake-clutch shield when you sharpen the blade, because you need to remove the blade in order to remove the blade-brake-clutch shield.

1. Stop the engine and wait for all moving parts to stop.
2. Disconnect the wire from the spark plug.
3. Close the fuel valve by moving the fuel-valve lever to the **left** (Figure 13).
4. Drain the gasoline from the fuel tank.
5. Tip the machine onto its **right** side (air filter up).

▲ WARNING

Tipping the machine may cause the fuel to leak from the carburetor or the fuel tank. Gasoline is extremely flammable, highly explosive, and, under certain conditions, can cause personal injury or property damage.

Avoid fuel spills by emptying the fuel tank as directed; never siphon.

6. Remove the 2 blade nuts, the accelerator, and the blade (Figure 35).

Figure 35

1. Blade
2. Blade nuts
3. Accelerator
4. Screw
5. Blade-brake-clutch shield

-
7. Remove the screws that secure the blade-brake-clutch shield to the mower housing (Figure 35).
 8. Remove the blade-brake-clutch shield and brush or blow all the debris from under the shield and around the blade-brake-clutch.
 9. Tighten the screws to secure the blade-brake-clutch shield to the housing.
 10. Install the blade, the accelerator, and the 2 blade nuts.
 11. Return the machine to the operating position.

Storage

To prepare the machine for off-season storage, perform the recommended maintenance procedures; refer to [Maintenance \(page 16\)](#).

Store the machine in a cool, clean, dry place. Cover the machine to keep it clean and protected.

Preparing the Fuel System

▲ WARNING

Gasoline can vaporize if you store it over long periods of time and explode if it comes into contact with an open flame.

- Do not store gasoline over long periods of time.
- Do not store the machine with gasoline in the fuel tank or the carburetor in an enclosure with an open flame. (For example, a furnace or a water heater pilot light.)
- Allow the engine to cool before storing it in any enclosure.

Empty the gasoline from the fuel tank when mowing for the last time before storing the machine.

1. Run the engine until it stops from running out of gasoline.
2. Choke the engine and start it again.
3. Allow the engine to run until it stops. When you can no longer start the engine, it is sufficiently dry.

Preparing the Engine

1. While the engine is still warm, change the oil in the crankcase; refer to [Changing the Engine Oil \(page 17\)](#).
2. Remove the spark plug.
3. Using an oil can, add about 30 ml (1 oz) of engine oil to the engine crankcase through the spark-plug hole.
4. Slowly rotate the engine several times by pulling the recoil-start handle to distribute the oil throughout the engine crankcase.
5. Install the spark plug but **do not** connect the wire to the spark plug.

General Information

1. Clean under the machine; refer to [Cleaning under the Machine \(page 23\)](#).
2. Clean any dirt and chaff from the cylinder, cylinder head fins, and blower housing.

3. Remove grass clippings, dirt, and grime from the external parts of the engine, the shrouding, and the top of the mower housing.
4. Check the condition of the blade; refer to [Inspecting the Blade \(page 20\)](#).
5. Check the condition of the accelerator; refer to [Inspecting the Accelerator \(page 20\)](#).
6. Clean the blade-brake-clutch shield; refer to [Cleaning the Blade-Brake-Clutch Shield \(page 24\)](#).
7. Service the air cleaner; refer to [Servicing the Air Cleaner \(page 17\)](#).
8. Tighten all nuts, bolts, and screws.
9. Touch up all rusted or chipped paint surfaces with paint available from an Authorized Service Dealer.

Removing the Machine from Storage

1. Check and tighten all fasteners.
2. Remove the spark plug and spin the engine rapidly using the starter to blow out the excess oil from the cylinder.
3. Clean the spark plug or replace it if it is cracked, broken, or if the electrodes are worn.
4. Install the spark plug; refer to [Servicing the Spark Plug \(page 18\)](#).
5. Perform any needed maintenance procedures; refer to [Maintenance \(page 16\)](#).
6. Fill the fuel in the fuel tank with fresh gasoline.
7. Check the engine-oil level.
8. Connect the wire to the spark plug.

Troubleshooting

Problem	Possible Cause	Corrective Action
The engine does not start.	<ol style="list-style-type: none"> 1. The fuel tank is empty or the fuel system contains stale fuel. 2. The throttle lever is not in the Choke position. 3. The wire is not connected to the spark plug. 4. The spark plug is pitted, fouled, or the gap is incorrect. 	<ol style="list-style-type: none"> 1. Drain and/or fill the fuel tank with fresh gasoline. If the problem persists, contact an Authorized Service Dealer. 2. Move the throttle lever to the Choke position. 3. Connect the wire to the spark plug. 4. Check the spark plug and adjust the gap if necessary. Replace the spark plug if it is pitted, fouled, or cracked.
The engine starts hard or loses power.	<ol style="list-style-type: none"> 1. The fuel tank contains stale fuel. 2. The air filter element is dirty and is restricting the air flow. 3. The underside of the mower housing contains clippings and debris. 4. The spark plug is pitted, fouled, or the gap is incorrect. 5. The engine oil level is low or the oil is dirty. 	<ol style="list-style-type: none"> 1. Drain and fill the fuel tank with fresh gasoline. 2. Clean the air filter pre-cleaner and/or replace the paper air filter. 3. Clean under the mower housing. 4. Check the spark plug and adjust the gap if necessary. Replace the spark plug if it is pitted, fouled, or cracked. 5. Check the engine oil. Change the oil if it is dirty or add oil if it is low.
The engine runs rough.	<ol style="list-style-type: none"> 1. The wire is not connected to the spark plug. 2. The spark plug is pitted, fouled, or the gap is incorrect. 3. The throttle lever is not in the Fast position. 4. The air filter element is dirty and is restricting the air flow. 	<ol style="list-style-type: none"> 1. Connect the wire to the spark plug. 2. Check the spark plug and adjust the gap if necessary. Replace the spark plug if it is pitted, fouled, or cracked. 3. Move the throttle lever to the Fast position. 4. Clean the air filter pre-cleaner and/or replace the paper air filter.
The machine or engine vibrates excessively.	<ol style="list-style-type: none"> 1. The blade is bent or is out of balance. 2. The blade mounting nuts are loose. 3. The underside of the machine contains clippings and debris. 4. The engine mounting bolts are loose. 	<ol style="list-style-type: none"> 1. Balance the blade. If the blade is bent, replace it. 2. Tighten the blade mounting nuts. 3. Clean the underside of the machine. 4. Tighten the engine mounting bolts.
The is an uneven cutting pattern.	<ol style="list-style-type: none"> 1. All 4 wheels are not at the same height. 2. The blade is dull. 3. You are mowing in the same pattern repeatedly. 4. The underside of the machine contains clippings and debris. 	<ol style="list-style-type: none"> 1. Place all 4 wheels at the same height. 2. Sharpen and balance the blade. 3. Change the mowing pattern. 4. Clean the underside of the machine.
The discharge chute plugs up.	<ol style="list-style-type: none"> 1. The throttle lever is not in the Fast position. 2. The cutting height is too low. 3. You are mowing too fast. 4. The grass is wet. 5. The underside of the machine contains clippings and debris. 	<ol style="list-style-type: none"> 1. Move the throttle lever to the Fast position. 2. Raise the cutting height. 3. Slow down. 4. Allow the grass to dry before mowing. 5. Clean the underside of the machine.
The machine does not self-propel.	<ol style="list-style-type: none"> 1. The self-propel drive cable is out of adjustment or is damaged. 2. There is debris under the belt cover. 	<ol style="list-style-type: none"> 1. Adjust the self-propel drive cable. Replace the cable if necessary. 2. Clean the debris from under the belt cover.

The Information Toro Collects

Toro Warranty Company (Toro) respects your privacy. In order to process your warranty claim and contact you in the event of a product recall, we ask you to share certain personal information with us, either directly or through your local Toro company or dealer.

The Toro warranty system is hosted on servers located within the United States where privacy law may not provide the same protection as applies in your country.

BY SHARING YOUR PERSONAL INFORMATION WITH US, YOU ARE CONSENTING TO THE PROCESSING OF YOUR PERSONAL INFORMATION AS DESCRIBED IN THIS PRIVACY NOTICE.

The Way Toro Uses Information

Toro may use your personal information to process warranty claims, to contact you in the event of a product recall and for any other purpose which we tell you about. Toro may share your information with Toro's affiliates, dealers or other business partners in connection with any of these activities. We will not sell your personal information to any other company. We reserve the right to disclose personal information in order to comply with applicable laws and with requests by the appropriate authorities, to operate our systems properly or for our own protection or that of other users.

Retention of your Personal Information

We will keep your personal information as long as we need it for the purposes for which it was originally collected or for other legitimate purposes (such as regulatory compliance), or as required by applicable law.

Toro's Commitment to Security of Your Personal Information

We take reasonable precautions in order to protect the security of your personal information. We also take steps to maintain the accuracy and current status of personal information.

Access and Correction of your Personal Information

If you would like to review or correct your personal information, please contact us by email at legal@toro.com.

Australian Consumer Law

Australian customers will find details relating to the Australian Consumer Law either inside the box or at your local Toro Dealer.

¹Residential use means use of the product on the same lot as your home. Use at more than one location is considered commercial use and the commercial warranty would apply.

²Some engines used on Toro LCE Products are warranted by the engine manufacturer.

³Whichever occurs first.

⁴Lifetime Frame Warranty - If the main frame, consisting of the parts welded together to form the tractor structure that other components such as the engine are secured to, cracks or breaks in normal use, it will be repaired or replaced under warranty at no cost for parts and labor. Frame failure due to misuse or abuse and failure or repair required due to rust or corrosion are not covered.

This warranty includes the cost of parts and labor, but you must pay transportation costs.

Instructions for Obtaining Warranty Service

If you think that your Toro Product contains a defect in materials or workmanship, follow this procedure:

1. Contact your seller to arrange service of the product. If for any reason it is impossible for you to contact your seller, you may contact any Toro Authorized Distributor to arrange service.
2. Bring the product and your proof of purchase (sales receipt) to the Service Dealer.
3. If for any reason you are dissatisfied with the Service Dealer's analysis or with the assistance provided, contact us at:

RLC Customer Care Department

Toro Warranty Company
8111 Lyndale Avenue South
Bloomington, MN 55420-1196
001-952-948-4707

See attached Distributor List.

Owner Responsibilities

You must maintain your Toro Product by following the maintenance procedures described in the *Operator's Manual*. Such routine maintenance, whether performed by a dealer or by you, is at your expense.

Items and Conditions Not Covered

There is no other express warranty except for special emission system coverage and engine warranty coverage on some products. This express warranty does not cover the following:

- Cost of regular maintenance service or parts, such as filters, fuel, lubricants, oil changes, spark plugs, air filters blade sharpening or worn blades, cable/linkage adjustments, or brake and clutch adjustments
- Components failing due to normal wear
- Any product or part which has been altered or misused or neglected and requires replacement or repair due to accidents or lack of proper maintenance
- Pickup and delivery charges
- Repairs or attempted repairs by anyone other than an Authorized Toro Service Dealer
- Repairs necessary due to failure to follow recommended fuel procedure (consult *Operator's Manual* for more details)
 - Removing contaminants from the fuel system is not covered
 - Use of old fuel (more than one month old) or fuel which contains more than 10% ethanol or more than 15% MTBE
 - Failure to drain the fuel system prior to any period of non-use over one month

General Conditions

The purchaser is covered by the national laws of each country. The rights to which the purchaser is entitled with the support of these laws are not restricted by this warranty.
