

High-Altitude Kit

Addendum

Dealers, give this addendum to the customer.

Keep this addendum with the *Operator's Manual* for your machine.

Important: If you are using this machine above 1500 m (5,000 ft), ensure that the High Altitude Kit has been installed so that the engine meets CARB/EPA emission regulations. The High Altitude Kit also increases engine performance while preventing spark fouling and hard starting. Place a high-altitude label on the machine when it is converted.

Convert the engine back to regular altitude use when running the engine under 1500 m (5,000 ft). Do not operate an engine that has been converted for high-altitude use at lower altitudes; otherwise, you could overheat and damage the engine.

If you are unsure whether or not your machine has been converted for high altitude use, look for the following label ([Figure 1](#)).
